EXTERIOR ELEVATED ELEMENTS (EEE) SB721 & SB326

What are **Mandates SB721 and SB326**? **SB326** is commonly referred to as the “balcony bill,” the legislation requires that “exterior elevated elements” be evaluated, inspected and, if necessary, repaired.

Bill SB326 affects condominium associations, Bill SB326 requires:

- The visual inspection of elevated building elements such as balconies
- First inspection is required by Jan 1, 2025 and then every 9 years thereafter: **Sampling**: Statistically significant sample to achieve 95% confidence. **Timing**: Every 9 years

SB721 is a bill that aims to add a new level of public safety to decks, balconies and other external, elevated structural elements in multi-family residential units. The inspections address structural integrity, flashings and waterproofing of these elements on buildings with three or more units and two or more stories in height.

Bill SB721 affects landlords for buildings with 3 or more multifamily dwelling units and requires:

- The visual inspection of elevated building elements such as balconies
- First inspection is required by Jan 1, 2025 and then every 6 years thereafter **Sampling**: At least 15% of each EEE type **Timing**: Every 6 Years

Services that BV offers to help fulfill Mandates SB721 & SB326

What Does the Inspection Involve?

BV will evaluate the condition, adequacy and performance of the various items that comprise the deck, balcony, landing or stairway structure with a focus on structural integrity. BV will also look for indications of unintended water intrusion and resulting dry rot or structural compromise. BV will inspect all materials and evaluate for rust and corrosion as well as indications of cracking or other compromising structural issues and that could affect structural integrity. BV will issue a report of findings along with photos sufficient to document the conditions of the building elements as a baseline for future inspections and to create a historical record. In regard to repairs, the majority of inspections likely result in the identification of minor problems (or no problems at all) that the owner can address as a matter of routine maintenance and upkeep.

Our services include:

- EEE Inspections
- Water Intrusion Solutions
- Planning
- Portfolio Pre-Screening
- Design & Engineering
- Project Management
